

CMLess features:

- ✓ **Automatically detect languages** contained within a collection of documents
- ✓ Bulk translate using the Mass Action feature in Relativity
- ✓ Translate documents that have **multiple languages**
- ✓ Support your **billing process** by accurately reflecting workload completed
- ✓ **Protect** your Translation Process with **User-Group permissions**

Information governance (IG) and eDiscovery procedures face mounting pressure from the dramatic growth of electronically stored information (ESI).

Within this environment, LOTE (Languages Other Than English) documents, including data collection, processing and reviewing can pose major challenges, especially when ensuring the mandatory confidentiality of eDiscovery procedures, as these typically preclude online translation.

Organizations need to search by keyword and find relevant documents and emails in the appropriate languages whilst controlling costs and maximizing productivity, so time-intensive human translation is usually not an option and the need for viable machine translation solutions becomes all the more apparent.

Ensure information security:

Your sensitive data stays secure. Translations never leave your network, preventing data leakage and ensuring compliance.

Reduce translation costs:

The use of automated language identification and machine translation reduces the need for localization or human translation costs.

Translate large volumes:

SYSTRAN's scalable architecture delivers fast translations, granting you additional time to review, analyze and produce a winning legal strategy.

Equip your eDiscovery:

Leverage the full range of linguistic functionalities like Translation, Named Entity Recognition and Domain Detection, found in the SYSTRAN Linguistic Development Kit

SYSTRAN offers 45 languages in more than 130 language pairs; other pairs possible upon request.
